

Marine Pressure Gauge for Ship Machinery

Pressure gauges designed for monitoring pressure in marine machinery and equipment. These gauges feature clear markings for pressure readings and are constructed with metallic housings and brass fittings.

Product Overview

Marine Pressure Gauge Reliability

This pressure gauge is specifically engineered for demanding marine machinery applications, ensuring accurate monitoring in harsh, high-pressure environments. Designed with a robust metallic housing and durable brass fittings, it offers superior resistance to the corrosive conditions typical of ship engine rooms. The clear, high-contrast circular dial provides precise pressure readings in MPa, allowing for consistent performance and safe equipment operation.

Technical Specifications

Suitable Environments

- Ship machinery
- Marine equipment
- Pressure monitoring systems

Pressure Measurement Unit	MPa
Construction Materials	Metallic Housing, Brass Fittings

Performance Metrics

Operating Range

-0.1 MPa

Min Pressure

0.6 MPa

Max Pressure
