

Marine Propulsion Engine 200-450 HP

This heavy-duty diesel engine is designed for marine applications. It provides reliable power ranging from 200 to 450 HP, suitable for various vessels.

Product Overview

High-Performance Marine Propulsion

This series of marine propulsion engines is engineered for heavy-duty applications, offering a power range of 200 to 450 HP. Designed for reliability and durability in demanding maritime environments, these units are suitable for various vessel types including workboats and fishing craft. The robust construction ensures long service life and efficient performance for international trade requirements.

Shipping & Logistics

Packaging

Wooden case, suitable for international trade freight models
