

Marine Radio Frequency Cable

These radio frequency cables are designed for shipboard marine communication systems. The cables have a braided shield to ensure signal integrity and come in various colors for identification.

Product Overview

Marine Radio-Frequency Cable Solutions

These shipboard radio-frequency cables are engineered specifically for demanding marine communication systems. Featuring a robust braided shield, they provide superior signal integrity even in harsh maritime environments. Available in various colors to facilitate easy installation and identification, these cables ensure long-term reliable performance across all shipboard applications.

Technical Specifications

Cable Classification	Radio-Frequency (RF)
Shielding Configuration	Braided Shield

Application Features

Primary Applications	Marine Communication, Shipboard Systems, Harsh Environments
Available Color Options	Yes
