

# Marine Stainless Steel Cooling Coil for Yachts

This pure stainless steel coil is designed for yacht and ship applications. It is engineered for efficient heat transfer and corrosion resistance in marine environments.

## Product Overview

### Marine Cooling Coil for Vessels

This high-performance marine-grade cooling coil is engineered specifically for use in yachts and maritime vessels. Constructed from pure stainless steel, the unit provides superior corrosion resistance and durability in harsh saltwater environments. It is designed to handle efficient thermal management for both cooling and heating applications onboard ships.

## Technical Specifications

Operating Temperature Range	-10 to 50 degrees
Flow Pressure	100

## Performance Metrics

### Air Flow Capacity

**1000 m3/h**  
Air Flow

## General Information

Product Category	Marine, Cooling Coil, Stainless Steel
