

Material Coating and Laminating Machine

This machine is designed for coating and laminating various materials. It features robust construction and precise control systems for consistent and high-quality results.

Product Overview

Industrial Coating and Laminating Solution

The Material Coating and Laminating Machine offers a versatile, high-precision solution for industrial surface treatment and composite production. Engineered for reliability, it features automatic temperature control and an optical correction system to ensure exceptional accuracy across various substrates including plastic, paper, and OPP films. This robust system is designed to provide consistent, high-quality results for diverse industrial applications.

Technical Features

Core Automation Functions

- Automatic temperature control
- Variable speed thickness adjustment
- Optical substrate correction
- Precise composite rate control

Coating Configuration

Single-head, Dual-head, Plastic Coating, Paper Coating, OPP Compound

Optional Equipment

Available Add-ons

- Auto-assembly trimming
- Side blowing
- Counting device
- Punching unit
- Folding mechanism
- Cutting device
- Cooling retractor
