

Material Dispensing Hopper

Heavy-duty metal hopper designed for precise material dispensing in construction and drilling applications. It features reinforced handles for easy maneuverability and a robust construction to withstand demanding job site conditions, typically used for pouring concrete or other materials into drilled holes or forms.

Product Overview

Material Dispensing Hopper

This heavy-duty material dispensing hopper is engineered for precise material flow in demanding industrial applications. Constructed with robust steel tubes, the unit features either rolled or welded structural integrity to ensure longevity on the job site. Designed specifically for compatibility with catheter systems, it provides a reliable solution for controlled material handling and pouring tasks.

Technical Specifications

Primary Application

Material Dispensing • Industrial Flow Control

Structural Construction

Rolled Steel, Welded Steel, Tubular Design

System Compatibility

Catheter systems
