

Material Handling Construction Machinery

This construction machinery is designed for material handling and processing on construction sites. It features a robust steel frame, conveyor belt system, and control cabin for efficient material transfer and mixing.

Overview

Heavy-Duty Material Handling Solution

This robust construction machinery is specifically engineered for efficient material handling and processing on demanding job sites. Featuring a heavy-duty hopper, a reliable conveyor belt system, and an integrated control cabin, it is built to streamline workflows. The unit incorporates a high-strength steel frame, ensuring the durability and stability required for large-scale construction projects.

Technical Specifications

Available Models

- YPJ-150
- YPJ-200

Build Quality

Heavy-duty • Steel frame construction

Primary Application

Material Handling, Material Processing, Construction Site
