

Material Slicing and Crushing Packaging Machine

This industrial packaging machine is designed for slicing and crushing materials. It features a stainless steel construction, cooling belt system, motor, drive system and is mounted on wheels for mobility.

Overview

Industrial Material Processing

This industrial-grade machinery is engineered for efficient material slicing and crushing, making it an essential component for high-volume packaging lines. Constructed from durable stainless steel, the unit ensures long-term operational reliability and hygiene compliance. It features an integrated cooling belt system to maintain material integrity during processing and is mounted on wheels for flexible placement within your facility.

Technical Specifications

Construction Material

Stainless Steel

Model Designation

CY60/100

Mobility

Yes

Features

Key Features

- Integrated cooling belt system
- Drum-style slicing and crushing mechanism
- High-durability motor and drive system
- Industrial safety warning protocols
