

MC55 Needle Roller Bearing

This needle roller bearing is designed for high load capacity in a compact space. It is suitable for use in automotive transmissions, gearboxes, and other mechanical systems.

Product Overview

MC55 Needle Roller Bearing Overview

The MC55 Needle Roller Bearing is engineered for high-performance mechanical systems requiring substantial load capacity within a compact spatial envelope. Manufactured from high-quality steel, these bearings are built to withstand demanding operating conditions, ensuring durability and a long service life. They are widely utilized in critical applications such as automotive transmissions and industrial gearboxes where precision and reliability are paramount.

Technical Details

Bearing Type	Needle Roller Bearing
Material	High-quality Steel

Applications

Common Applications

- Automotive Transmissions
- Gearboxes
- Mechanical Systems

Key Features

Design Benefits	High Load Capacity, Compact Design, Durable Construction
-----------------	--
