

Mechanical Component Set with Gear Ring and Splined Shaft

This set includes a gear ring, spur gear, and splined shaft. These components are designed for high-torque applications and efficient power transmission.

Product Overview

Universal Mechanical Precision Set

This mechanical component set is designed for high-performance transmission applications where precision and durability are paramount. The kit includes a high-torque internal gear ring, a robust spur gear with an integrated shaft, and a precision-crafted splined shaft. Engineered for minimal backlash and maximum power transmission efficiency, these components provide a reliable solution for complex rotating machinery.

Technical Details

Included Components

- Internal gear ring
- Spur gear with integrated shaft
- Splined shaft

Application Compatibility

Mechanical Assemblies • Rotational Motion Systems • Power Transmission

Key Features

High-torque capacity, Minimal backlash, Efficient power transmission, Precision engineered
