

Mechanical Fuel Injection Pump for Diesel Engines

This mechanical fuel injection pump is designed for diesel engines. It features multiple high-pressure fuel outlets and a mechanical governor system for precise fuel metering and timing.

Product Overview

High-Precision Mechanical Fuel Injection Pump

This mechanical fuel injection pump is engineered for reliable performance in diesel engine applications. Designed for precise fuel metering and timing, it features a robust cast metal housing and an integrated mechanical governor system. It is an essential component for maintaining efficient combustion and optimal engine power output.

Technical Specifications

Pump Type

PM Pump • Mechanical

Model Number

BDK4PM105R1BJ

Compatible Engine Models

YZ4105 ZLQ

Factory Reference ID

0504001

Design Features

Construction Features

- Robust cast metal housing
- Mechanical governor system
- Multiple high-pressure fuel outlets
