

Mechanical Music Box Mechanism with Punched Paper Roll

This mechanical music box mechanism uses a punched paper roll to play music. It features a geared motor for paper transport, a reading mechanism, and a sound-producing element.

Product Overview

Mechanical Music Box System

This mechanical music box mechanism offers a versatile platform for custom musical expression through a manual punched paper system. The device features a robust geared motor for precise paper transport and a tactile pin-reading mechanism that translates grid-marked paper holes into audible notes. Designed with a metallic chassis and support legs, it serves as an excellent component for creative engineering projects and bespoke musical installations.

Technical Specifications

Primary Components

- Geared paper transport motor
- Pin-based reading mechanism
- Metallic support chassis
- Grid-patterned paper roll system

Operational Capabilities

Customizable Sequences • Manual Hole Punching • Mechanical Sound Generation

Construction Material

Metal, Durable Chassis, Mechanical Components
