

Media Streaming Device with LED Indicators

This compact device is designed for reliable and efficient delivery of audio and video content. Multiple indicator LEDs allow for monitoring of link status, activity, and other key parameters.

Product Overview

High-Performance Media Streaming

This compact media streaming device is engineered for the reliable and efficient delivery of high-quality audio and video content. It features a sophisticated array of LED indicators designed to provide real-time monitoring of system performance. Ideally suited for professional applications, this unit ensures consistent connectivity and status visibility for demanding streaming environments.

Application Fields

Audio/Video Streaming • Data Transmission • Professional Media Systems

System Indicators

Visual Status Monitors

LK (Link Status), HD (High Definition), FLAG, ACT (Activity), STREAMHIGHWAY

Key Features

Capabilities

- Compact form factor
- Real-time stream monitoring
- Efficient audio/video data processing
- Comprehensive LED status array
