

Medical Air Handling Unit for Purification

This air handling unit is designed for medical purification applications. It provides advanced filtration and precise control of temperature and humidity.

Overview

Medical Grade Air Purification

This high-efficiency air handling unit is specifically engineered for critical medical environments, including operating rooms and cleanrooms. It features robust construction paired with advanced filtration systems to meet stringent air quality standards. The unit integrates precise temperature and humidity control alongside energy-efficient components for optimal performance.

Technical Features

Core Capabilities

- Advanced filtration system
- Precise temperature control
- Precise humidity control
- Energy-efficient operation

Application Areas

Operating Rooms, Cleanrooms, Medical Facilities

Control System

Yes
