

Metal Bonded Diamond Fickert Block for Granite Grinding

Metal bonded diamond fickert blocks are used for grinding granite. These diamond bricks provide efficient material removal and consistent grinding performance.

Product Overview

High-Efficiency Granite Grinding

These metal bonded diamond fickert blocks are engineered for the automated grinding and polishing of stone slabs, including granite, marble, and concrete. Designed for superior material removal, they offer significantly longer service life compared to traditional magnesite abrasive tools. Their robust construction ensures consistent performance, low power consumption, and high efficiency in industrial stone processing environments.
