

Metal Casting and Forging Molding Line

This automated molding line is engineered for high-volume production of metal castings and forgings. The system incorporates interconnected stations for mold creation, filling, and processing, along with automated material handling.

环型造型线 Ring shaped molding line

Product Overview

High-Efficiency Molding Solution

This ring-shaped molding line is engineered for high-volume metal casting and forging processes. The system integrates interconnected stations that streamline mold creation, filling, and processing to ensure consistent production quality. Designed for industrial-scale operations, it features automated material handling and pouring systems that optimize throughput while maintaining precision.

Technical Specifications

| | |
|-----------------------|--------------------------|
| Configuration | Ring-shaped molding line |
| Process Compatibility | Casting, Forging |

Key Features

Automation

Automated Material Handling • Automated Pouring

Production Capabilities

- High-volume output
- Consistent mold creation
- Integrated processing stations
