

Metal Coil Slitting Line

This industrial slitting line is engineered for the precise cutting and processing of metal coils. The system provides decoiling, slitting, and recoiling sections to ensure accuracy and consistency.

Product Overview

High-Efficiency Metal Coil Slitting Line

This industrial H.R. slitting line is engineered for the precise cutting and processing of metal coils in high-volume production environments. Designed with heavy-duty construction and advanced control mechanisms, it ensures superior leveling quality, high slitting accuracy, and robust recoiling capabilities. The system features a user-friendly man-machine interface and is built for easy maintenance, making it an efficient solution for modern metalworking operations.

Key Features

Performance Highlights

- High-quality leveling precision
- High slitting accuracy
- Strong and reliable recoiling performance
- High-efficiency production output

Operational Benefits

User-Friendly Interface, Easy Maintenance, Simple Operation

System Components

Integrated Sections

Section	Function
Decoiling	Initial coil handling and feeding
Slitting	Precise metal cutting
Recoiling	Final coil winding and tensioning
