

Metal Coil Slitting Machine

This metal coil slitting machine is designed for efficiently slitting metal coils into narrower widths with precision. It incorporates advanced control systems for accurate tension control and high-quality slit strips, suitable for various metal types and thicknesses.

Overview

Precision Metal Coil Slitting System

This metal coil slitting machine is designed for the precise uncoiling, slitting, and recoiling of steel sheets to meet specific client requirements. The system integrates multiple advanced workstations, including leveling, shearing, and scrap management, to ensure high-quality output. Engineered for efficiency and accuracy, this machine provides consistent performance suitable for various metal types and thicknesses.

Certifications

Certifications & Standards

CE, ISO 9001:2000, SGS, UKAS, Bureau Veritas

System Components

Core System Components

- Uncoiler
- Leveling System
- Shearing System
- Slitting System
- Scrap Recoiling System
- Damping Structure
- Recoiling System
- Unloading System

Operational Features

Key Operational Benefits

High-Precision Slitting • Advanced Tension Control • Robust Construction • Minimal Material Waste

Customization

Yes
