

Metal Coil Uncoiler and Straightener

This heavy-duty machine efficiently uncoils and straightens metal coils. It features adjustable straightener rollers and a control panel for operational control.

Product Overview

Integrated Coil Processing Solution

This Metal Coil Uncoiler and Straightener is an integrated system designed to optimize floor space in industrial metalworking environments. By combining the uncoiling and straightening functions into a single unit, it offers a simple, economical, and highly practical solution for coil handling. The machine features a specialized stepless variable speed device, allowing for precise control over the discharging process to ensure consistent material flow.

Key Features

Design Advantages

- Integrated uncoiler and straightener design for space efficiency
- Simple, robust construction for ease of maintenance
- Economical and practical operation
- Stepless variable speed control for discharging

Capabilities

Coil Uncoiling, Metal Straightening, Stepless Speed Control, Space-Saving Design
