

Metal Cutting and Bending Machine

This metal cutting and bending machine is engineered for precise metalworking tasks. It features a robust construction and a powerful motor to efficiently cut various metal materials.

Overview

High-Performance Metalworking Solution

This metal cutting and bending machine is engineered for precision and efficiency in industrial and workshop environments. Featuring a robust construction and a powerful motor, it is designed to handle a variety of metal materials with ease. The machine includes essential safety features like a protective guard and an adjustable workpiece clamp, ensuring secure and accurate operation for repeatable, high-quality results.

Key Features

Safety Equipment

- Integrated Safety Guard
- Adjustable Workpiece Clamp

Capabilities

Metal Cutting, Metal Bending, Precision Work, Industrial Grade

Performance Metrics

Performance Highlights

1 Industrial

Application Type
