

Metal Cutting and Bending Machine

This high-precision cutting and bending machine is designed for metal forming applications. It features a robust construction, precise cutting mechanism, and adjustable fold-bending capabilities.

Overview

High-Precision Metal Forming Solution

This metal cutting and bending machine is engineered for high-precision shearing and forming applications. Featuring a robust construction, it provides the stability required for demanding metalworking tasks. The unit integrates both precise cutting mechanisms and adjustable fold-bending capabilities, offering a versatile solution for efficient production environments.

Key Features

Design Highlights

- Robust structural construction
- Adjustable fold-bending settings
- Stable base for operational accuracy
- User-friendly control interface

Core Capabilities

Metal Cutting, Fold-Bending, High-Precision, Metal Forming

Operational Metrics

Machine Type

Shearing and Fold-Bending Machine
