

Metal Cutting and Folding Machine

This machine is designed for both cutting and folding metal sheets. It offers efficient and precise processing for various industrial applications.

Overview

Precision Metal Processing

This metal cutting and folding machine is engineered for high-accuracy industrial metal forming. Featuring a versatile set of cylindrical and disc-shaped components, it is designed to handle demanding shearing and bending tasks with reliability. The system's modular design allows for a range of geometries, making it an essential tool for workshops requiring consistent, professional-grade metal fabrication results.

Technical Capabilities

Included Components

- Cylindrical elements
- Disc-shaped elements
- Central aperture components

Primary Functions

Metal Cutting, Folding, Bending, Shearing

Performance Metrics

Best Suited For

Industrial Applications • Metal Forming • Precision Engineering
