

Metal Cutting and Folding Machine

This machine is designed for cutting and folding metal sheets. It is commonly used in metal forming operations.

Overview

Industrial Metal Processing Solution

This metal cutting and folding machine is engineered for heavy-duty industrial metal forming operations. Featuring a robust construction with a precision control panel, it allows for accurate adjustments and consistent monitoring during production. Its durable design ensures reliability in demanding manufacturing environments, making it an essential tool for efficient metal fabrication.

Technical Specifications

Machine Type	Cutting and Fold-Bend Machine
Application	Metal Forming, Industrial Use, Heavy-Duty

Design & Build

Design Features

- Robust structural design
- Integrated precision control panel
- High-visibility color scheme
- Reinforced base construction
