

Metal Cutting and Folding Machine

This cutting and folding machine is designed for precision metal forming. It features a robust frame, advanced control system with a mounted control panel, and a foot pedal for operation.

Overview

Precision Metal Forming Solution

This cutting and fold-bend machine is engineered for high-precision metal forming applications. Built with a robust frame for stability, it incorporates an advanced control system and an intuitive mounted control panel. Designed for efficiency, the machine includes a foot pedal operation, making it a versatile and reliable choice for professional metalworking tasks.

Technical Specifications

Operation Method	Foot pedal controlled
Control System	Integrated mounted control panel
Build Quality	Robust Frame, Precision Engineered

Applications

Primary Functions

- Metal Cutting
- Metal Bending
- Metal Folding
