

Metal Cutting and Folding Machine

This machine is used for cutting and folding metal sheets. It provides efficient and accurate performance for various metal fabrication applications.

Product Overview

Professional Metal Cutting and Folding Solution

This high-performance metal cutting and folding machine is engineered for precision and durability in demanding industrial environments. It features an ergonomic design focused on operator comfort, incorporating vibration-dampening materials to reduce fatigue during extended operation. Built for versatility, this tool provides reliable control for cutting and bending applications, ensuring consistent results across various metalworking tasks.

Design & Ergonomics

Handle Features	Ergonomic Grip, Vibration Dampening, Dual-Tone Foam
Grip Material	High-density foam

Applications

Suitable Applications

- Bicycle components
- Scooter manufacturing
- Tool fabrication
- General metalworking
