

Metal Cutting and Folding Machine

This high-precision machine is designed for cutting and folding metal sheets. It features a robust frame, advanced control system, and precise cutting mechanism for versatile metal forming applications.

Overview

High-Precision Metal Processing Solution

This high-precision cutting and fold-bend machine is engineered for versatile metal forming applications, combining robust construction with advanced control systems. It is designed to handle various materials and thicknesses, ensuring clean cuts and highly accurate bends for professional manufacturing environments. The system features a user-friendly interface and integrated safety protocols to maximize operational efficiency and operator protection.

Technical Specifications

Key Design Features

- Robust frame construction
- Advanced control system
- Precise cutting mechanism
- User-friendly interface
- Integrated safety features

Capabilities

Metal Cutting, Metal Folding, Metal Bending

Performance

Precision Performance

1 High

Cutting Precision

1 High
