

Metal Cutting and Folding Machine

This cutting and folding machine is engineered for precise metal forming. It combines cutting and bending processes, optimizing manufacturing workflows.

Overview

Precision Metal Forming Solution

This cutting and fold-bend machine is expertly designed for precision metal forming, integrating both cutting and bending operations into a single streamlined process. Built with a robust frame and advanced pneumatic cylinders for automated actions, it ensures consistent reliability in demanding fabrication environments. The included digital display allows for precise control, significantly enhancing both efficiency and accuracy for various metalworking applications.

Technical Specifications

Control System	Digital display for precise control
Automation	Pneumatic cylinders
Build Quality	Robust frame

Capabilities

Core Functions	Metal Cutting, Metal Bending, Metal Folding, Precision Forming
----------------	--
