

Metal Cutting and Folding Machine

This high-precision machine is designed for cutting and folding sheet metal. It features an automated system that ensures accurate control and consistent results.

Product Overview

High-Precision Metal Forming Solution

This metal cutting and folding machine is engineered for high-precision metal forming applications in demanding industrial environments. Equipped with multiple cutting torches, it ensures efficient and accurate material processing for high-volume fabrication needs. The integrated automated system provides consistent results and precise control, making it a reliable asset for streamlined production workflows.

Technical Capabilities

Automation

Automated System

Capabilities

Cutting, Folding, Bending, Metal Forming

Cutting Torches

2 torches

Usage

Recommended Environment

Industrial metal fabrication
