

Metal Cutting and Folding Machine

This cutting and folding machine streamlines metal forming processes. It integrates cutting and bending capabilities into a single unit, suitable for sheet metal fabrication and prototyping.

Overview

Precision Metal Forming Solution

This cutting and fold-bend machine is a versatile, all-in-one unit engineered for precision metal forming operations. By integrating both cutting and bending capabilities into a single system, it significantly streamlines manufacturing workflows and enhances production efficiency. The robust frame and advanced control panel make it an ideal choice for sheet metal fabrication, prototyping, and creating complex, high-quality metal shapes.

Capabilities

Key Features

- Robust structural frame
- Integrated cutting mechanism
- Precision fold-bending system
- Programmable control panel

Primary Functions

Metal Cutting, Metal Bending, Sheet Metal Fabrication, Prototyping

Performance

Operational Highlights

1 Combined

Integrated Units
