

Metal Cutting and Folding Machine

This cutting and folding machine is engineered for efficient metal forming. It features integrated material feeding, cutting, and bending stations, managed by a control panel for precise adjustments.

Product Overview

Professional Metal Forming Solution

This cutting and fold-bend machine is engineered for high-efficiency metal forming processes. It integrates a robust construction with a seamless material transport system, including feeding mechanisms, precise cutting units, and dedicated bending stations. Designed for reliability and precision, the system features an intuitive control panel for parameter adjustments and comprehensive safety guards to ensure operator protection.

Technical Features

Core Components

- Material hopper
- Feeding mechanism
- Cutting unit
- Bending station
- Material transport system (pipes and conveyors)

Control Interface

Integrated control panel for precise operation and adjustment of cutting and bending parameters

Safety & Compliance

Safety Equipment

Safety Guards, Emergency Stop Buttons

Application

Primary Use Cases

Metal Cutting • Metal Bending • Metal Forming
