

Metal Cutting and Folding Machine

This machine combines cutting and bending operations into a single process, increasing efficiency. It is designed for producing complex shapes and profiles in sheet metal.

Overview

Versatile Metal Forming Solution

The cutting and fold-bend machine is a versatile tool designed for precise metal forming, combining cutting and bending operations into a single, efficient process. Its robust construction ensures durability and stability, delivering accurate results even during intensive fabrication tasks. With adjustable settings for various metal thicknesses and bending angles, this machine is an ideal choice for producing complex shapes and profiles in sheet metal.

Technical Capabilities

Key Performance Indicators

1 Combined

Process Integration

Core Functions

Metal Cutting, Metal Bending, Sheet Metal Forming

Design & Build

Construction

Robust Construction • High Stability • Durable

Adjustability

- Variable metal thickness settings
- Adjustable bending angles
