

Metal Cutting and Folding Machine

This high-precision machine is designed for cutting and folding metal in various forming applications. It features a robust construction that ensures stability, durability, and repeatable performance.

Overview

High-Precision Metal Processing

This metal cutting and fold-bend machine is engineered for high-precision forming applications. Its robust construction ensures stability and long-term durability, while the integrated advanced control systems allow for precise adjustments and consistent, repeatable results. Designed to handle both shearing and folding tasks, this versatile unit provides exceptional efficiency for diverse metalworking requirements.

Technical Capabilities

Key Features

- High-precision processing
- Robust construction for stability
- Advanced control system for precise adjustments
- Repeatable performance

Primary Functions	Metal Cutting, Fold-bending, Shearing, Metal Forming
Model Identifier	DK7725AZ
