

Metal Cutting and Folding Machine

This cutting and folding machine is designed for precision metal forming. It features a computerized control system for accurate cuts and bends, along with a multi-axis system for creating complex shapes.

Overview

Precision Metal Forming Solution

This advanced cutting and fold-bend machine is engineered for high-precision metal forming applications. Featuring a robust, stable frame and a sophisticated computerized control system, it ensures consistent accuracy for complex shapes. The multi-axis design offers versatile material compatibility, making it an essential tool for modern manufacturing and fabrication environments.

Technical Capabilities

Control System	Computerized
Axis Configuration	Multi-axis system

Safety & Design

Safety Features	Emergency Stop, Enclosed Work Area
Frame Construction	Robust stability-focused frame

Applications

Primary Applications

- Manufacturing
- Fabrication
- Precision metal forming
