

Metal Cutting and Folding Machine

This cutting and folding machine is a versatile tool for metal forming. It combines cutting and bending functionalities to streamline manufacturing.

Product Overview

Versatile Metal Forming Solution

This cutting and fold-bend machine is a high-performance tool engineered for diverse metal forming applications. By efficiently integrating both cutting and bending functionalities into a single unit, it significantly streamlines manufacturing workflows. It is an ideal choice for metalworking shops and industrial environments that require consistent precision and reliability for shearing and bending tasks.

Technical Specifications

Recommended Setting

Metalworking Shop • Industrial

Model Designation

EK, VS 250

Core Applications

Metal Cutting, Metal Bending, Shearing, Metal Forming
