

Metal Cutting and Folding Machine

This cutting and folding machine is designed for precision metal forming. It features a robust frame for stability during operation and a programmable control system for automated tasks.

Overview

Precision Metal Fabrication

This cutting and folding machine is engineered for high-precision metal forming tasks. Featuring a robust frame for enhanced stability and a programmable control system, it streamlines automated fabrication workflows. This versatile unit combines both cutting and bending mechanisms, making it an essential tool for diverse manufacturing and metalworking applications.

Technical Specifications

Capabilities

- Precision metal cutting
- Automated metal folding
- Programmable control system

Suitable Industries

Manufacturing • Metalworking

Design Features

Robust Frame, Programmable, Automated, Versatile
