

Metal Cutting and Folding Machine

This high-precision machine is designed for cutting and folding metal in various forming applications. Combining both cutting and folding capabilities, it allows for the efficient fabrication of complex shapes with consistent performance.

Overview

Precision Metal Fabrication Solution

This high-precision cutting and fold-bend machine is expertly designed for complex metal forming applications. It seamlessly integrates cutting and folding capabilities into a single unit, enabling efficient and accurate fabrication of intricate shapes. Built with robust construction for long-term durability and stability, it ensures consistent performance across various metal types and thicknesses, making it an ideal choice for high-quality industrial manufacturing.

Technical Specifications

Build Quality

Robust Construction • High Precision • Industrial Grade

Model Designation	CM-I
Capabilities	Metal Cutting, Metal Folding, Metal Bending
Control System	Advanced control system for precise operation
