

Metal Cutting and Folding Machine

This industrial machine integrates both cutting and folding functionalities for sheet metal. It features a robust design with a control panel and ventilation for thermal management.

Product Overview

Industrial Metalworking Solution

This industrial metal cutting and folding machine is engineered for precision metalworking tasks, combining cutting and fold-bending capabilities in a single unit. Built with a robust chassis, the machine is designed for durability and includes integrated wheels for enhanced mobility across the workshop floor. It features an intuitive control panel with multiple indicators and switches for efficient operation, alongside optimized ventilation slots to ensure effective thermal management during heavy-duty use.

Technical Details

Model ID	LGK-63
Key Features	Precision Cutting, Fold-Bending, Mobile Chassis, Thermal Management
Mobility	Yes
