

Metal Cutting and Folding Machine

This precision machine is designed for cutting and folding metal sheets. It features a robust frame, an advanced control system, and a multi-axis back gauge for accurate and repeatable bending operations.

Overview

Precision Metal Forming Solution

This precision cutting and fold-bend machine is engineered for high-accuracy metal forming operations. It features a robust frame construction and an advanced control system designed to deliver repeatable, high-quality bending results. Equipped with a multi-axis back gauge system and a powerful hydraulic drive, it ensures smooth operation and precise material positioning for a variety of metalworking applications.

Technical Capabilities

Bending Mechanism	Hydraulic system for smooth and powerful bending force
Back Gauge System	Multi-axis back gauge system for precise material positioning

Safety & Control

Safety Features	Light Curtains, Emergency Stop Buttons
Control System	Integrated control panel for easy programming and operation

Construction

Frame Construction	Robust frame designed for stability and durability
