

Metal Cutting and Folding Machine

This cutting and folding machine is designed for precise metal forming operations. It combines cutting and bending functionalities into a single unit, streamlining the manufacturing process.

Product Overview

Precision Metal Forming Solution

This cutting and fold-bend machine is engineered for high-precision metal forming operations, combining cutting and bending functionalities into a single, efficient unit. Built with a robust frame and a linear guide system, it ensures exceptional stability and smooth movement during operation. The inclusion of a material support arm with adjustable stops allows for accurate positioning, making it a versatile tool for various metalworking applications.

Technical Specifications

Operational Features

- Robust frame for stability
- Linear guide system for precision
- Material support arm
- Adjustable stops for positioning
- Automated pneumatic system
- Adjustable control panel

Model Number	CWB-300x100
Capabilities	Metal Cutting, Metal Bending, Metal Folding
