

# Metal Cutting Bandsaw

This metal cutting bandsaw is designed for cutting various materials including steel and aluminum. It features a robust construction with a cast iron saw frame and base for stability and reduced vibration during operation.

## Overview

### Professional Metal Cutting Solution

The BS-260G is a high-performance metal cutting bandsaw engineered for precision work with steel, aluminum, and various alloys. Built with a heavy-duty cast iron saw frame and base, it ensures maximum stability and minimal vibration for clean, accurate cuts. This versatile machine combines advanced features like hydraulic downfeed control and an integrated coolant system to deliver professional results in demanding workshop environments.

## Performance Metrics

### Key Capabilities

**260 mm**

Max Capacity

**1 Integrated**

Coolant System

## Construction & Design

### Stability Benefits

- Reduced vibration during high-speed operation
- Enhanced structural rigidity
- Increased cutting accuracy

### Frame Construction

Robust cast iron saw frame and base

## Operational Features

### Downfeed System

Hydraulic Control • Automatic Shut-off

### Speed Control

Variable speed control for optimized material performance

### Workpiece Clamping

Adjustable material vise for secure clamping and accurate angles

## Maintenance & Longevity

### Cooling System

Integrated coolant system to dissipate heat and extend blade life

## Material Compatibility

### Supported Materials

Steel, Aluminum, Non-ferrous Metals
