

Metal Cutting Machine

This industrial metal cutting machine is designed for precise and efficient processing of metallic materials. It features a robust frame, a cutting head with adjustable controls, and a worktable for securing materials.

Overview

Industrial Metal Cutting Solution

This industrial metal cutting machine is engineered for the precise and efficient processing of a wide range of metallic materials. Built with a robust frame for stability, it features an advanced cutting head with adjustable controls to ensure accuracy across various metalworking applications. The integrated worktable provides a secure platform for handling workpieces, making it a reliable choice for professional metal fabrication environments.

Technical Specifications

Model Identifier	GS325X33/100
Application	Metalworking, Industrial Cutting, Metal Fabrication

Key Features

Key Features

- Robust structural frame
- Adjustable cutting head controls
- Integrated material worktable
