

Metal Cutting Machine Cross Slide

Precision cross slide table designed for metal cutting machines. It features rigid construction for stability and smooth movement via handwheels, suitable for milling, drilling, and machining.

Product Overview

Precision Metal Cutting Cross Slide

This precision cross carriage is engineered specifically for metal cutting machines, offering a robust solution for milling, drilling, and various machining operations. Designed with a rigid construction to ensure maximum stability during heavy-duty tasks, it provides smooth and accurate movement via manual handwheels. The versatile mounting platform allows for seamless integration into existing setups, making it an essential component for workshops requiring precise positioning and reliable performance.

Key Features

Core Capabilities

- Rigid construction for enhanced stability
- Smooth and accurate manual movement
- Versatile mounting platform
- Ideal for milling and drilling operations

Usability

Reliable Quality • Easy to Use

Application

Primary Applications

Metal Cutting, Milling, Drilling, Precision Positioning
