

Metal Cutting Machine

This industrial metal cutting machine is designed for precision and efficiency. It features a robust frame, advanced control panel, and integrated coolant system for optimal performance and extended blade life.

Overview

Industrial Precision Cutting

This industrial metal cutting machine is engineered for high precision and operational efficiency in demanding metalworking environments. It features a robust, heavy-duty frame designed to minimize vibration and ensure accurate cuts across various materials. Equipped with an advanced control panel and an integrated coolant system, the unit is optimized for sustained performance and extended blade longevity.

Technical Specifications

Model Number	GS325X45/100
Machine Type	Industrial Metal Cutting Machine

Key Features

Core Features

- Robust structural frame
- Advanced control interface
- Integrated coolant system
- High-efficiency cutting performance

Performance Highlights

325 mm
Max Cutting Capacity
