

Metal Forming and Bending Machine

This metal forming and bending machine is designed for shaping metal materials. It features a rotating work surface, adjustable bending components, and a user-friendly control panel for efficient metal forming.

Overview

Industrial Steel Bar Bending Solution

This heavy-duty steel bar bender is engineered for efficient and precise bending of metal reinforcement bars in construction and manufacturing environments. Designed with a robust frame and a rotating work surface, it offers reliable performance for shaping metal materials. The machine features adjustable bending angles, mobility wheels for workshop maneuverability, and user-friendly controls to ensure operational safety and efficiency.

Technical Specifications

Bending Diameter Capacity	6-40 mm
Motor Power	4 KW
Voltage	380 V
Rated Current	8.5 A
Bending Speed	5-8 seconds

Physical Dimensions

Net Weight	300 kg
Overall Dimensions	850 x 760 x 780 mm

Features

Key Operational Features	Adjustable Bending Angles, Dual Foot Pedal Control, High/Low Speed Adjustment, Mobile Wheel Base
