

Metal Forming Casting

This heavy-duty casting is designed for metal forming applications. The robust component provides a stable and durable platform for shaping metal.

Product Overview

Heavy-Duty Metal Forming Casting

This robust metal forming casting is engineered for demanding industrial applications, providing a stable and durable platform for shaping metal. Featuring a curved profile for optimal load distribution and structural integrity, it includes a central mounting plate with a through-hole and reinforced sections with integrated attachment points. Its design is well-suited for integration into larger metal forming machinery or tooling systems.

Technical Specifications

Key Design Features

- Central mounting plate with through-hole
- Reinforced sections
- Integrated attachment points
- Curved structural profile

Manufacturing Process	Sand Casting
Part Markings	2000-6, 81 87
