

Metal Forming Machine

This machine is designed to shape metal into specific forms through various processes. It is suitable for heavy-duty industrial applications involving cutting, shaping, or forming metal.

Overview

Industrial Metal Forming Solutions

This series of metal forming machines is engineered for robust industrial applications, offering reliable performance for cutting, shaping, and forming metal components. Designed for versatility, these units cater to various production requirements, ranging from smaller mechanical operations to larger, modern hydraulic or pneumatic systems. These machines provide the heavy-duty power and control necessary for demanding metalworking tasks.

Technical Specifications

Available Models

- JC21-160
- J21-63A

Operation Types

Mechanical • Hydraulic • Pneumatic

Primary Applications

Metal Cutting, Metal Shaping, Metal Forming, Heavy-duty Industrial
