

Metal Forming Press with Coil Handling

This heavy-duty metal forming machine features a large, green vertical press with integrated motors and control systems. It is accompanied by coil handling equipment, including an uncoiler and straightener, designed to feed metal strip into the press.

Overview

High-Efficiency Metal Forming System

This heavy-duty metal forming press is engineered for continuous, high-precision industrial processing. The integrated system includes advanced coil handling capabilities, featuring an uncoiler and straightener to ensure seamless material feeding. Designed for reliability and performance, it provides a robust solution for demanding metalworking applications.

Technical Specifications

System Components

- Vertical Press
- Uncoiler
- Straightener
- Integrated Control System

Model Number	J31G-125
Machine Type	Metal Forming Press
Primary Applications	Metalworking, Coil Processing, Continuous Forming
