

Metal Forming Roll

This high-performance roll is designed for casting and forging applications. It is engineered for durability and precision, ensuring consistent material deformation and extended service life.

Overview

High-Performance Metal Forming Roll

This high-performance roll is specifically engineered for demanding casting and forging applications. Designed for durability and precision, it ensures consistent material deformation and offers an extended service life in industrial settings. Its robust construction and specialized surface treatment allow it to withstand extreme operating temperatures and pressures, making it an ideal component for metal forming machinery.

Technical Specifications

Design Features

- Robust industrial construction
- Specialized surface treatment
- High-temperature resistance
- High-pressure resistance

Durability

High Durability • Extended Service Life

Primary Applications

Casting, Forging, Metal Forming
