Product Overview

Professional Metal Gutter Forming Solution

This high-performance metal gutter forming machine is engineered for precision and efficiency in high-volume gutter manufacturing. Featuring a robust roll-forming system, it progressively shapes sheet metal into complex gutter profiles with consistent accuracy. Built for industrial durability, the machine utilizes hardened steel rollers and a reliable hydraulic cutting system to ensure long-term operational success.

Technical Specifications

Drive System	Electric motor with chain drive
Cutting System	Hydraulic
Construction Materials	Hardened Steel Rollers, Robust Steel Frame, Galvanized Components

Operational Features

Key Features

- Adjustable guides for various gutter sizes
- Continuous operation capability
- Multiple forming stations
- Integrated safety guards

Safety Features

Wire mesh guards • Safety shielding
