

Metal Halide Gas Discharge Lamp

This metal halide lamp is a type of high-intensity discharge (HID) gas discharge lamp. It produces light by sending an electric arc through a gaseous mixture of vaporized mercury and metal halides.

Product Overview

High-Performance Lighting Solution

This metal halide lamp is a high-intensity discharge (HID) gas discharge light source designed for demanding environments. It generates light via an electric arc through a mixture of vaporized mercury and metal halides, delivering exceptional luminous efficacy. Ideal for commercial, industrial, and outdoor applications, this lamp provides superior color rendering and a long operational lifespan.

Technical Specifications

Lamp Technology	Metal Halide (HID)
Suitable Applications	Commercial, Industrial, Outdoor, Marine, Photography, Film

Performance Features

Key Benefits

- High luminous efficacy
- Excellent color rendering
- Long operational lifespan
- High-intensity discharge output
